Rates of Government Salage per acre

May 1871

1871

1872

Average rates of Government Salage per acre

1876

1877

Average Value of grain of Kharan in wet land in Kharan's Division

consisting of 14 Ryot Villages in Kharan's Division Salage per acre for a period of 15 years

A

From 1856 to 1876	Cultivated are in acre	Gross outturn	Of which 45 per cent is at 45 per cent	Average prices of grain	Value of the quantity of grain given in 1856	Rates per acre
1876-8-2	7178-92	31185-11-3	36856-1-1	1-7-11	55533-2-2	7-11-9

Salage

This is an insignificant Village - Hence it needs no lengthy remarks -
 Wet lands depend upon one small - but of a superior quality generally -
 Wet lands are not cultivated here - There are no other villages contiguous to this -
 The average annually the meaned dry open lands varies from 2 to 4 to 5
 10 per acre - The maximum rate is charged only for a few few lands
 which are cultivated with Grains & out crops - The average in case of the Village is
 15-8 per annum as per tithe of the Mahajanama -
 In considering the fertility of soil &c, I frame the value of the Village
 as follows.

Wet 23/100 and 50 per acre - 13-12-0

Dry 19/100 per acre at 10 per acre - 19

Total 32-12-0

Kharan

Signature

Fairing Value of grain of Helworm on wet land in the Jangjungdon
 Magaom consisting of 15 Kyu Villages in Sakai Talag for a period
 of 15 years -

The Trustees ²⁸ request to confirm the fourth Account & state that it was prepared on the actual measurement of the lands - Hence the 4th Account is adopted in the settlement with a view to say that it will now be safe to conceal ~~from~~ any portion of the lands situated in the Village nor to class (particular lands) as waste & unarable lands -

Valuation -

IV - ----- Let Cows depend upon your Tanks of moderate size. They are in ripeness. They are fed by a Pungent Stream & by the waste water of the adjacent Town & Villages. The Tanks are fed by a small stream. The water is not good generally. The Trustees planned 22 acres of land as follows: 10 acres as waste. They say that the 10 acres of waste are of 7 or 8 years uncultivated lands & that they are fed to be cultivated within 5 or 6 years by improving the Tanks. This is ~~an~~ a usual story.

From 1856 to 1870	Culture area in acres	Grass cultured	Of which guano is spread at 45 percent	Average price of grains	Value of the quantity of grains	Rate per acre
R 1858	A B	R 1858	R 1858	R 1858	R 1858	R 1858
7191-8-2	5034-0-2	44709-9-4	212937-	1-7-9	31607-2-6	6-4-6

The statement of the adjoining Villagers shew that there is some energy & action in the matter of waste
 & no reason why there must be so much waste in the Village while the lands are good &
 & while the sown & irrigation are an influential ones - Power of the old lands are plentiful
 annually & there - Nangla & Panjahi lands are not of a very superior quality - No doubt is raised
 in the Village - The village is in flourishing state - Like the adjoining Villages
 the average in case of the Village is 136 Rupees per acre - This is not true -
 contiguous, Ayaz Villages are Ruskad, Pettugay the average - 136 - assuming the Village
 value for a period of 15 years & previous to 1772 & 70 comes to - 6 - 1 - 7572 - per acre - inf. value
 average cost amount of these two Villages comes to 50 Rupees per acre - The average Dry season -
 50 - 50 - 130 per acre - In consideration of the fertility of soil & I approve the valuation of the
 follows -

Oct 35 ^{new full} ^{land} at 60 ^{per} ^{for} ^{acre} - 210 - -
 Oct 10 ³/₄ ^{new} ^{land} at 2 ¹/₂ - 270 - 26 ^{Per}
 Total 236-14-0
 Dry 30 ^{new full} ^{land} at 12 ^{per} ^{for} ^{acre} - 928 - -
 Dry 9 ³/₄ ^{new} ^{land} at 6 ^{per} ^{for} ^{acre} - 27 - -
 Total - - 26-15-0
 Grand Total - - 261-13-0
