Valuation.

11 Wet lands depend upon two tanks of moderate size - they are in repair -

They are fed by Jangle streams - The Tanks are filled annually. Security of Water is not full generally.

The Maharajah says that 13% of wet flooded or waste are partly cultivated & partly waste a few years -

This is a usual story. Some of the Wet lands are full water annually 2 times - The area then full water 2 times may be -

between 1/2 of the wet extent - No Vambai is raised in the village - Tharago & are raised in dry lands -

The Village is in good state - like the adjacent open villages. Wet & dry soil is of a superior quality generally -

The contiguous open village is Pithy Yendel. The average wet assessment of that village is 1258 for 1260 - for which detailed accounts are available -

12 years from 1258 to 1260 - 7 for 1263-64-65-67-68-69 & 1270 - for which detailed accounts are available -

comes to 773 per acre & the average dry assessment comes to 573 6 per acre - The Maharajah says that their wet & dry lands - except flooded or waste are full water 2 times -

of the open village of Pithy Yendel in fertility & that large extent of Wet lands is full water in the open village, while small extent is full water 2 times -

in the village under settlement - All they ask is to reduce the average wet assessment of the open village on the ground that they wish to have double extent of double extent -

It seems to be reasonable to some extent - The average income of the village as per statement of the Maharajah is 1258 Rupees per annum - This is very low -

The valuation of the village is as follows - with the aid of the Maharajah -

11 full water annually & partly 2 times at 6 1/2 Rupees per acre 260
