III. The house depends upon one tank of moderate size. It is in repair. It is fed by one of the branching channels of Nallur. The tank is filled annually. It affords a good supply of water for drinking & as such is well stocked on the heads fulliminted occasionally. No Pungu fullimint is in the village. Some of the best Dussore fulliminted annually. Soil is of a mixed character generally. There are no open lands contiguous to the Dussore. At least there are no open villages within a distance of about one mile. The average income of the village as per statement of the Mahajamans is 9472. There is no any house. The village is in flourishing state. No scarcity of water is felt. In consideration of the above circumstances with the aid of the Mahajamans I frame the valuation of the village as follows:-

From ^{to} 1855 to 1870	Cultivated area in acres	Crop out- turn	Spent in gammade share at 65 per cent	Average price of grain	Value of quantity of gammade in col 4.	Ratio per acre
1870-75	627-59	52432	2254	1-8-8	3-145-4-11	5-7-8

-	20 acres cultivated annually once in fall & partly returned at	100
-	~~5~~ 8 per acre	
-	7 acres cultivated & at 38 per acre	26
	Lill	121
	Rent \$100 87 64 }	A. L. L.

Palencia

Also talk about the brown oarites on the part of the Range? Talked. The brown oarites were inserted in the same order as they were found in the
Copper plate of the Range. Since they are confirmed here & the 38 and 50 fossils each other there are significant.

III The frontier & the villages adjacent thereto are under the management of the Navy.
