Leard Copied

The person of 57 of 16 say that 7/8 of the village is in possession of the family of the
 person of 15 1/2 of 16 since long - But they cannot any longer & when they are paid their
 Valuation The village consists of 16 equal Vattas they are enjoyed as
 shown in the preceding side - The lands are undivided -
 Porcupine paid on the number of Vattas equally &
 permanently -

Wet lands depend upon one Tank of moderate size - It is in repair. It is fed by a small stream
 It is fed by the water flowing from the Agaw village of Kachmaru. The Tank is getting annually
 fertility of water is not felt generally. The Mahajanams say the 11 Acre are full
 - annually & 3 acres occasionally. Some of the wet lands are full water annually & some
 Kachmaru lands are of a medium fertility generally - No Pungla cultivation in this village.
 The average income of the village per statement of the persons of 16 is 25 Rupees per annum.
 This is not true - The contiguous Agaw village is Kachmaru. The average water assessment of
 that village calculated for a period of 15 years previous to 1770 comes to 6 Rupees per acre.
 The Mahajanams say that the soil of the Darnasaram may be placed on par with that of the
 and Agaw village. In consideration of the fertility of soil & I judge the valuation of the village as

Wet 11 Acre full water annually at 6 Rupees per acre - 66 -
 Wet 3 Acre water 4/5 at 10 Rupees per acre - 30 -
 Total - 96 -
