Wet lands depend upon 7 small Tanks - they are in repair & sown in String Beans they are fed by Jungle & Hill Streams & by the Tanks of the neighbouring Villages - they are sown annually in Jan. Scarcity of Water is felt in wet - but it is felt occasionally - The Mahagannans say that the Wet & Dry lands classed as waste are Matthakkad in these not yet fully cultivated - annually. There is Shank in the reference to the nature of crops - though not to its full extent - 1/5 or 1/6 of the Wet lands are in full water with crop annually. Shank in the reference to the nature of crops - Pungah lands are not fully cultivated - they are fully cultivated only once by Shank, Kollos, Verago, Kolom, Pasalat, Piros & Tuberos - Harvest is moderate generally. Wet soil is generally of a medium quality - there are some good & some bad superior lands - Pungah soil is of the same description. The earth is mixed with stones - Shank is raised on one or two small hills - the Shank lands are not stationary - they are changed annually. The village is not of a very superior quality - No Pungah is fully cultivated with Shank - there is no room for further improvement - The Mahagannans say that there are some well lands irrigated with Shank & Shank are medium to superior the average assessment of the adjacent - Wet lands - The statement given on the 2^d side of the first sheet shows the average Wet assessment of the Mahagannans in which the Village Shank is estimated - The average assessment of the adjacent Shank Dry lands are at 13 Shank per acre. This is stated in detail on the nature of crops - The fully cultivated lands (Dry) in the Village are of the same description as those of the adjacent Shank Village - The average Shank of the Village as per statement of the Mahagannans are 52 Shank per acre. This is not true as usual - with reference to the Shank of soil & from the Shank of the Village as shown below with the aid of the Mahagannans -
