

Valuation

of Wet lands in the Village depend upon one Tank of large size or upon one Tank of small size. They are in repair they are fed by Jangle Stream & they are irrigated by the Tank of Varangan which is fed by Kalamati River. The Tanks are filled annually. Security of Water is not getting felt generally. The Mahajannams say that 7 acres of Wet land is as good as one of 10 acres of unwatered land & that they will be brought under plough within 30 years. Some of the Wet lands are cultivated annually & some 1/2 is said to be the average area free of cultivation & some 1/2 or two acres are cultivated occasionally. With the better there are no Totals at all lands in the Village is about 1600. The Village is in good state like the adjacent village. The contiguous village is Mela Sambogolen. The average yield assessment of that Village calculated for a period of 15 years comes to 572 per acre. The average dry assessment of that Village comes to 1-2 per acre. The Mahajannams say that the Dry Wet soil of the adjacent village of Sambogolen is better than the soil of the Village under assessment. The average income of that Village which is a representation of the Mahajannams is 1600 per annum. It is very low. In consideration of the fertility of soil & I give the valuation of the Village as follows.

Wet 52 acres cultivated annually once & partly 2 times at 572 per acre	357
Wet 1/2 acres cultivated annually 10 times per acre	62
Dry 48 1/2 acres at 1 Rupee per acre	48 1/2
	Total - 405 1/2
Residue	
6-2-16
