 1876-1877

Vide preceding side

III In the boundary account of 1721, it is said that the boundary line of the Village runs from
 one tree to another tree & I asked the holder of the Village to ascertain whether the trees are still standing.
 The holder wrote to the Tapsalor of the Village to find out the trees boundary of the Village & send account of the same to him. From the Tapsalor's report it appears that the trees are not
 in existence & that he has drawn a boundary line around the area as is compared with the
 boundaries in the account of 1721, with permanent marks. The holder of the Village also
 now joined by the Tapsalor are correct ones. The holder of the Village also
 the same. The Tapsalor found on measurement the area of the Village to be 207
 The survey is really a striking one. But it is estimated within the proper limits.
 There are 24 villages contiguous to the Lencarum under all hand.

IV The Mahaganam of the Village produced two accounts as follows -

Account	Wet area	Dry area
Account of 1721	46-75	160-41
Account of 1722	46-75	160-41

The Mahaganams say that not only they but every one is concealing this content.
 In the account of 1721 the area of the Village called Mahaganam are given
 of 1722 of the Village, the area is split. Both of the Villages belong to the holder of the Village.
 These Villages are contiguous to each other. I would have brought both the Villages on one
 But in the account of 1721, the area of Linnavalayam village alone is given. The Village
 recorded & recognized boundaries. Hence it is impracticable to bring two Villages on one & the same
 The area of Linnavalayam village is taken with reference to the boundaries of the Village while that of
 reference to the holder in the standard accounts as it has no boundaries. The Mahaganams say
 Hence - Now Porcup is split with reference to the rates on which Porcup was fixed regularly on the two Villages.
