XI. The results of the measurement of the Tanailson, who was deputed to measure the boundary line of the Village, are as follows - after making certain alterations as requested by the Mahayannas in the office.

Nangab — ^{an} 102-61-
Pungab — 779-78- 882-79-

Of which deduct Pombola — 230-07-

Remainder — 652-72-

Nangab fullwater — 61-25-

Dry Waste — 39-47- 100-88-

Pungab fullwater — 496-90-

Waste — 58-00- 550-90-

Vanline — 58- 652-72-

Register No. 892

Sheet No. 1033

The Tanailson found 30 Ann of Dry as fit to be fullwater converted into fullwater. The Mahayannas pleased that they are not fit either for Dry or fullwater - These lands are therefore transferred to the head of Pombola lands. They also requested another item consisting of 16 Ann. as Pombola's, this is also done. They are admitted the fairness of the measurement account with the above exceptions & signed the measurement account. Thus the measurement account is adopted in this settlement. I heard from the women of the village, that principal shareholders paid some bribe to the Government who of the former was who went to measure the village - Hence I cannot much confidence upon the results of the measurement. The account however it brought large extent of Dry fullwater lands that were concealed by the Mahayannas, to light.

XII. Wet lands in this Village depend upon 6 Tanks of moderate size. Of these two are large & four are small. The Tanks are in repair. The Tanks are fed by Jungle Streams. The Tanks are filled annually. They are fed also by the waste water of Pinnang stream. Durmasanams. They are fed also by the waste water of the Tank of Kollungedy. In this Village scarcity of water is not felt generally for ordinary fullwater lands. The Mahayannas say that 61 Ann of Wet & 495 Ann of Dry are fullwater annually. & that 39 1/2 Ann of Wet & 58 Ann of Dry placed as waste are partly fit to be fullwater. & that the wet waste are of 10 years unallotted lands & the Dry Waste are of 3 or 4 years unallotted lands. I can consider as appears from the results of my enquiry that there is some exaggeration in the matter of Waste. Some of the wet lands are fullwater annually 2 times. Nangab & Pungab lands are of superior quality generally. Vanline is raised in this Village to a small extent. The Village is in flourishing state. The Mahayannas say that no portion of Dry lands are fit to be converted into wet in future. The average income of this Village as per first account of the Mahayannas is 153 Rupees per annum. They never received their income after the concealed lands were brought out. In any case their alleged income is unduly low. It is in fact not so much as their income of the contiguous Agyer Village is. Kiranur. The average of the Agyer Village calculated for a period of 15 years previous to 1720 comes to 9 2/3 per Ann. This is rather high. The average Dry assessment of the contiguous Village varies from 12 to 14 per Ann. The Mahayannas complain that their wet lands are inferior to those of the contiguous Agyer Village. This seems to be true to some extent. I think that a reduced wet assessment should be introduced into this Village. In consideration of the fertility of soil & the proximity of the Village as follows - (See next side)
