Valuation

IV - - - - - The lands in this Village depend upon one Tank of moderate size - It is in repair - but the bund is not very strong - The Tank is fed by Ponglee Stream & by the Water falling from the adjacent Villages - The Tank is filled annually - Scarcely of Water is not felt for the lands that are fullwatered annually. The holder of the Village cleared 17 1/2 Acre of Wet as fullwatered lands & 3 1/2 Acre of Wet & 11 Acre of Dry as waste - They say that the waste lands are long uncultivated lands - ones & that they are fit to be fullwatered within the next 10 years - Some of the Wet lands are fullwatered annually 2 times - No grown crops are raised - The Village is not as in such a state as it ought to be - Nanyola & Panyola lands are rather medium character - The average income of the Village is 31 Rupees per annum as purchased by the Mahayamam. This is not true - The contiguous Ayer villages are Shropadilly & Pappigudi - The average net amount of these villages is 5-8-4 & 10-3-6 per Acre respectively - The average Dry water vary from 0-0-4 to 0-1-4 per Acre - The holders of these villages say that the soil of the village is much inferior to that of the adjacent villages - This seems to be true & is somewhat - In consideration of the fertility of soil & the quantity of water I presume the valuation of the village is following (See next page).
