General Remarks

The specimens collected on the Pacific are according to the various sets in which they are distributed on the first four to the same collection. Under many of the specimens, however, there are also some which have apparently been collected in the same locality but in different years. The number of specimens in the various sets is given in the margin of the page. The set survey of specimens is subsequent to the distribution of the specimens. The set of specimens is given in the margin of the page.
